THE MONUMENTAL STANDARD / V3

CINEMATIC CAROUSEL PRODUCTION SYSTEM

The complete upload-and-use guide to the approved Train Trade Transform campaign. Adaptable to any brand.

ART DIRECTION / COPY / PHOTO PROTECTION / PROMPTS / QA

V3 / MONUMENTAL STANDARD EDITION

READ THIS FIRST

Automatic execution contract

INSTRUCTION TO CHATGPT

Treat this document as a reusable production brief when the user asks you to create a carousel. Read its complete text and inspect the nine embedded campaign images before designing. Apply the current user’s brand, topic, photographs and offer. This is a reference system, not permission to reuse the reference people, personal claims or mentorship offer for another business.

WHEN THIS PDF IS THE ONLY INPUT

If the user merely uploads this guide, ask one compact question: “What brand and topic is this for, what action should readers take, and which photos should I use?” If the current conversation already supplies those answers, start production. Do not ask for information already available. Do not silently reuse an unrelated prior campaign.

DEFAULT WHEN THE BRIEF IS SUFFICIENT

Produce nine individual 1080 x 1080 slides, a separate preview, copy transcript, production notes and a ZIP. Use all requested photos purposefully. Plan the entire narrative before rendering. Deliver the artwork, not just a storyboard. If the user specifies a different length or format, adapt the sequence and recompose the canvas.

CAPABILITY TRUTH

This PDF supplies instructions and visual references; it cannot install tools, preserve memory across unrelated chats or guarantee identical renders. Use available image-generation and file-export tools. If generation is unavailable, explain the specific limitation and provide the complete copy and per-slide production prompts; do not claim finished artwork exists. Never fabricate download links.

FIND WHAT YOU NEED

Production map

START AND STRATEGY / PAGES 2-9

2 Execution contract. 4 Campaign contract. 5 Input card. 6 Emotional engine. 7 Hook writing. 8 Nine-slide narrative. 9 Photo inventory.

DESIGN AND BUILD / PAGES 10-15

10 Human protection. 11 Visual DNA. 12 Typography. 13 Composition geometry. 14 Symbolic sculpture. 15 Lighting and depth.

WORKFLOW AND REFERENCES / PAGES 16-25

16 Production workflow. 17-25 The nine approved slides: full-colour artwork, exact copy, source-photo filename and the design logic behind each page.

PROMPTS AND HANDOFF / PAGES 26-35

26 Shared generation prompt. 27 Per-slide record. 28-29 Master execution instruction. 30 Repair prompts. 31 Length and niche adaptation. 32 Caption and pinned comment. 33 Quality gate. 34 Measurement and version control. 35 Reference and handoff.

THE CAMPAIGN CONTRACT

What this edition preserves

THE APPROVED LOOK

The Train Trade Transform campaign combines real source photographs, monumental Greek sculpture, architectural depth, warm directional light, tall editorial serif type, warm white and muted gold. It feels like a coordinated series of campaign posters. The person remains the visual anchor; the statue is a separate symbolic object.

THE ARGUMENT

The campaign confronts the gap between stated ambition and repeated behaviour, then gives the reader an observable method: schedule the work, respect rules, reduce distraction, seek useful feedback and keep a seven-day scorecard. The invitation follows that method. The lesson must remain useful even if the reader never buys.

WHAT APPROVAL DOES AND DOES NOT ESTABLISH

The user enthusiastically approved the creative result. That establishes a preferred aesthetic and voice, not proven conversion performance. No engagement, sales, test results or psychological effectiveness metrics were supplied. Treat the explanations in this guide as design reasoning, not scientific proof that a particular phrase changes behaviour.

ACCEPTANCE ORDER

Current user instructions first. Accurate claims and human identity second. Mobile readability third. Clear narrative fourth. Consistent art direction fifth. Decorative drama last. If sculpture, smoke, typography or a crop undermines an earlier requirement, change the effect rather than accepting the defect.

BRIEF BEFORE BEAUTY

A compact input card

BRAND AND AUDIENCE

Brand/page: [name]. Audience: [specific people and situation]. Topic: [one problem]. Desired takeaway: [one change in understanding or behaviour]. Tone: [direct, calm, technical, provocative]. Profanity: [none / occasional / approved language]. Do not infer permission for profanity merely from this reference campaign.

DELIVERABLE AND IMAGERY

Slide count: [default 9]. Canvas: [default 1080 square]. Photos: [files]. Use every photo: [yes/no]. Protected people: [all, by default]. Logo/font assets: [files or none]. Imagery mode: [exact-photo preservation / AI-assisted editorial composite / generated scenes]. Allowed additions: [sculpture, architecture, light, etc.].

COPY AND OFFER

Copy supplied: [exact / editable / write original]. Offer: [verified product or service]. Benefits: [confirmed inclusions]. Price: [current amount or omit]. CTA: [one action and destination]. Evidence: [real screenshots, testimonials, product data, or none]. No evidence means no invented results, scarcity, quotes or guarantees.

SAFE DEFAULTS

If nonessential fields are missing, infer a coherent design from the attachments and state the assumption in production notes. If a missing detail affects truth, identity or the destination of a sale, omit the claim or ask. An absent price does not block production. A missing photo required for an exact recreation does.

THE EMOTIONAL ENGINE

Recognition -> tension -> agency -> action

RECOGNITION

Name a situation the intended reader can recognise: repeatedly resetting a plan, taking impulsive trades, missing scheduled work, or accepting a distraction. Specific behaviour is stronger than “you need discipline.” Start with an observable pattern rather than diagnosing every reader’s motives.

TENSION

Show a credible cost: another unfinished project, another week without a record, another decision made without rules. The approved hook uses a provocative interpretation of avoidance. For more cautious brands, frame it as a question: “Are you protecting your potential by never testing it?” Avoid claiming that every setback comes from laziness.

AGENCY

Resolve the tension with a small action and a reason. “Track the session so you can see whether the plan was followed” is useful. “Become unstoppable” is not a mechanism. Keep the demand proportional to the problem; respect real constraints and distinguish an excuse from a genuine lack of time, money, health or access.

ACTION

Give one step the reader can take today, then one optional commercial continuation. Challenge habits without attacking human worth. Avoid humiliation, fake urgency, guaranteed income, invented social proof and claims that purchasing proves someone is serious. The reader should leave with more clarity, not just more anxiety.

WRITE THE HOOK

A sharp opening with a promise behind it

CONSTRUCTION

Combine a familiar frustration with a specific reframe. Headline: 3-10 dominant words where practical. Support: one concise thought that opens a question the next slide answers. Aim for 12-30 words total on the hook. Use a real human image with an expression or pose that can carry the emotional weight.

THREE WORKING PATTERNS

Repeated behaviour + cost: “Another reset. The same routine.” Contradiction + consequence: “Your standards end at your mood.” Protective belief + challenge: “What would change if you stopped keeping ‘I could’ as your backup plan?” Adapt the pattern to the actual audience; do not repeatedly recycle the same accusation.

REPAIR A GENERIC HOOK

Weak: “Change your life today.” Stronger: “You keep restarting a plan you never made room for.” Why: the second identifies a recognisable failure and sets up calendar design as the lesson. A visually dramatic headline still needs an answer somewhere in the sequence.

EDITORIAL TEST

Can someone understand the tension in two seconds? Does the next slide develop it? Is the statement defensible or clearly rhetorical? Could the brand say it aloud naturally? Is the language distinct without being cruel? Cut a hook that depends on invented numbers, diagnoses or promises.

THE NINE-SLIDE ARC

One argument, nine purposeful beats

01-03 / EXPOSE THE LOOP

01: interrupt with the cost or contradiction. 02: identify the recurring behaviour. 03: explain what is missing from the current approach. The first three slides must progress; do not repeat the hook in three different fonts. By slide 3, the reader should know what the carousel will help them do.

04-06 / TEACH THE METHOD

Use three distinct modules. In this campaign: TRAIN makes preparation and follow-through visible; TRADE establishes process and risk rules; TRANSFORM addresses attention and boundaries. For another business, replace these with its genuine method. Do not force a three-pillar brand structure onto a one-step service.

07-09 / ENABLE THE NEXT STEP

07: introduce a support mechanism, here accountability. 08: make implementation concrete, here a seven-day scorecard. 09: summarise the standard and invite one action. The final offer should address the problem taught, not introduce an unrelated product.

PACE AND DENSITY

Alternate portrait scale, type position, photo count or reading density every 1-3 slides. Teaching pages can use 25-50 words; a mechanism may need 35-60. These are drafting ranges, not permission to shrink type or delete user-approved copy. Insert a quiet visual beat after a dense pair when the argument allows.

PHOTO INVENTORY

Every asset needs a job

CLASSIFY BEFORE RENDERING

Record filename, dimensions, orientation, people, pose, useful negative space, visible logos, source quality and intended slide. Label assets as identity source, actual scene, style reference, brand asset or evidence. Never let a person from a style reference replace the user’s subject.

ASSIGN BY MEANING

A solitary portrait can support reflection. A real coaching interaction supports feedback. A training scene supports execution. A confident portrait supports the invitation. A gym photograph does not prove trading results; it can carry a process message without pretending to document a trading session.

USE-ALL RULE

Count the requested assets and assign each one before generation. If there are more photos than slides, use intentional two-photo layouts that explain one idea, or expand the sequence when the count is flexible. Do not silently omit a photo, repeat a favourite instead, or invent an asset to fill a slot.

PRESERVE ORIGINALS

Keep source files unchanged. Crop phone controls and letterboxing only when they are not part of the requested visual. Never reconstruct covered anatomy to rescue a bad crop. If a face, logo or hand is essential but too small or obscured, use another layout or request a better source.

PROTECT THE HUMAN

The most important production constraint

LOCKED ATTRIBUTES

Keep facial geometry, expression, gaze, hairstyle, skin tone, tattoos, body proportions, muscularity, clothing, accessories, hands and pose. Scale the whole person proportionally. Do not deepen abs, widen shoulders, slim a waist, whiten teeth or change ethnicity to make the composition feel more dramatic.

EXACT PHOTO MODE

When exact identity or clothing detail matters, retain the original person’s pixels on a protected layer. Generate or edit only the surroundings. Use a careful mask, preserve natural edge detail, and place type independently. This requires suitable compositing tools. It cannot be guaranteed by wording an image-generation prompt more forcefully.

AI-ASSISTED COMPOSITE MODE

A reference-guided generator can create cohesive environments quickly but can also alter faces, bodies, hands, garment lettering and bystanders. The approved campaign used this mode. Its aesthetic approval is not evidence of pixel-perfect identity preservation. Disclose this mode; compare each output to its original before publishing.

REJECT AND REPAIR

Return to the original source if identity changes materially. Do not use the distorted result as the new identity reference. If a local repair is impossible, remove the effect or switch to exact-photo composition. A disclaimer is not a substitute for repairing an obvious likeness failure.

THE VISUAL DNA

Dark space, human presence, monumental type

PALETTE BY ROLE

Deep charcoal #080909: dominant reading surface. Ink #101010: architectural shadow. Warm white #EEE9DF: primary type. Antique gold #BE995C: emphasis and rules. Light gold #D9BC78: restrained highlights. Secondary neutral #B6B0A5: quiet utility. Keep natural skin and clothing colours rather than forcing every pixel into the palette.

MATERIAL LOGIC

Use two or three compatible materials: dark stone, warm metal and real fabric, for example. Sculpture supplies scale and permanence. Real equipment and clothing keep the scene connected to the source. If every edge glows and every object is gold, the hierarchy disappears.

CONTRAST

Protect the person’s midtones and create dark negative space around words. Aim for at least 4.5:1 contrast for essential small text and 3:1 for large display text. These are practical design targets, not a claim that a generator can calculate contrast. Inspect the exported image where background detail crosses letters.

CONSISTENCY

Keep palette, type behaviour, footer treatment and light temperature related across all slides. Vary composition, not the entire visual language. The set should still feel like one campaign if the brand name is covered.

TALL TYPE THAT READS

Display drama with a quiet supporting voice

FONT ROLES

Use a tall, high-contrast editorial serif for headlines: a Bodoni-style direction with strong vertical strokes and fine hairlines. Use a clean neutral sans-serif for body text and utility. The campaign’s generated lettering is a visual reference, not an authenticated font. Choose licensed font files when deterministic typesetting is required.

SCALE AT 1080 SQUARE

Starting targets: headline 84-126 px; very short emphasis 132-160 px; secondary display 48-72 px; body 30-36 px, with 28 px as a lower working floor for essential reading. Footer 18-22 px. Material qualifications 22-26 px. Font sizes are not universal: inspect actual cap height and the phone-size render.

LINE BREAKS AND EMPHASIS

Break at meaning. Keep the setup warm white and one decisive phrase gold. Avoid orphaned single words unless deliberate. Begin headline leading near 0.95-1.05 times type size; body near 1.25-1.4. Preserve at least 8 px of visible clearance between large glyphs. Never stretch lettering horizontally to force a fit.

FIT ORDER

Change text-block width or composition, then line breaks, then authorised copy length. Reduce font size only after those options. Do not put copy across eyes, important body details, product evidence or busy shirt graphics. Keep body copy clean: no metallic texture, thick outlines or excessive glow.

COMPOSITION GEOMETRY

Repeatable coordinates, flexible art direction

CANVAS AND SAFE AREA

Default 1080 x 1080. Essential copy inside x=80-1000 and y=80-1000. Decorative frame may sit 28-48 px from the edge. Keep a consistent footer near y=968-998 while allowing for glyph height. These are proposed production targets; the approved generated images do not obey every coordinate exactly.

PRESENCE / MIRROR

Presence: source subject on the right, readable copy in the left 45-50%, background sculpture secondary. Mirror: reverse the reading surface only when the original photo supports it; do not mirror the person. Preserve at least 32-56 px of breathing room between type and a protected silhouette.

ACTION / THRESHOLD

Action: headline above, group scene across the lower portion, body in a calm band between them. Threshold: centred statement above a doorway or path, useful for a visual reset. Never place a new architectural element where it makes the original action physically impossible.

DIPTYCH / INVITATION

Diptych: one hero photo and a smaller related image, divided cleanly, one argument only. Invitation: portrait plus a concise offer block and one CTA. Keep the close in the same campaign world; avoid abruptly switching to a generic pricing card. Use a thin frame only if it adds order.

SCULPTURE WITH PURPOSE

Greek-god imagery as a supporting metaphor

CHOOSE A MEANING

A weathered bust can represent reflection or standards. A standing athlete can support deliberate practice. A doorway can represent a decision. A pillar can suggest structure. Match one metaphor to the slide’s lesson. Do not add statues simply because an empty corner is available.

SCALE AND POSITION

Place a monumental sculpture behind or beside the real person, with enough depth separation that the two never merge. Keep the statue’s face from competing with the headline or human face. Avoid a stone arm that appears to emerge from someone’s shoulder. Maintain plausible floor contact and perspective.

EFFECT BUDGET

Usually one dominant symbolic addition and one atmosphere treatment per slide. If the statue is dramatic, keep particles and glow subdued. If the doorway provides the main shape, use little or no sculpture. Quiet slides make the biggest scenes feel intentional.

HONEST CONTEXT

Added temples, columns and statues are editorial scenery, not proof of a visited venue, property ownership, wealth or results. Never convert an actual person into marble or add armour unless specifically requested. For brands where mythology is irrelevant, translate the metaphor into appropriate materials and spaces.

LIGHT, DEPTH AND TEXTURE

Create dimension without hiding the photograph

LAYER STACK

Background environment -> architectural or sculptural addition -> contact shadows -> protected source people -> local light integration -> readability scrim -> headline -> body -> rules and folio -> restrained final grain. Keep type separate when tools allow. Avoid repeatedly re-rendering a human layer during text corrections.

LIGHTING

Choose a plausible source: doorway, window, ceiling light or reflected practical. Match shadow direction and colour temperature. Warm highlights can sit against neutral dark shadows. Preserve natural skin, fabric folds and white clothing detail. Do not turn skin orange or use HDR sharpening to manufacture definition.

DEPTH

Match perspective, object scale, focal depth and edge sharpness. Background statues should not be sharper than the foreground subject without a photographic reason. Use soft environmental haze behind people; keep it off eyes, hands and body copy. Contact shadows keep inserted objects from floating.

FINAL GRADE

Balance exposure first, then deepen the environment selectively. Check the result beside the original photograph. Add grain only after the composition and type work. Grain should unify layers, never conceal a poor cutout, malformed hand or unreadable letter.

PRODUCTION WORKFLOW

A complete path from brief to export

01 / PLAN

Read the brief and all source assets. Choose one thesis and desired action. Record missing facts. Build a slide map with role, exact copy, assigned photo, layout, protected subject area and one optional symbol. Lock the text before rendering so later edits do not drift the argument.

02 / ESTABLISH THE STYLE

Render one representative slide using its original photo. Inspect the person, typography, contrast and metaphor. Use that result as a style reference only; never import its person into other slides. Once the system works, produce the remaining slides with the same shared style specification and individual photo roles.

03 / VALIDATE AND REPAIR

Check each slide at full resolution and approximately 360 x 360. Compare the person with the source. Read every word and number. Repair one identified failure at a time. If generated text is unreliable, typeset it on an independent layer instead of repeatedly changing the entire picture.

04 / HAND OFF

Export numbered sRGB PNGs or high-quality JPEGs at the actual requested dimensions. Create a contact sheet outside the numbered sequence. Include approved copy, prompts, photo mapping and production notes. Open every file and test the archive. Deliver a real download, not a promise to produce one later.

CAMPAIGN 01

Hook / avoidance

APPROVED CAMPAIGN REFERENCE

Source photo:
IMG_6809.jpeg

Square export:
1080 x 1080

Imagery mode:
AI-assisted
editorial composite

EXACT CAMPAIGN COPY

YOU'RE NOT SCARED
OF FAILING.
You're scared of trying properly—
and losing the excuse.

DESIGN LOGIC AND PROTECTION

The lone human and monumental bust establish scale without requiring a claim about wealth. The gold line carries the confrontation; the short support opens the loop for slide 2. Treat the motive as provocative campaign rhetoric, not a diagnosis of every reader.

CAMPAIGN 02

Pattern / inconsistency

APPROVED CAMPAIGN REFERENCE

Source photo:
IMG_6807.jpeg

Square export:
1080 x 1080

Imagery mode:
AI-assisted
editorial composite

EXACT CAMPAIGN COPY

YOUR STANDARDS
END AT YOUR MOOD.
You train when you feel good.
Work when you feel inspired.
Then wonder why nothing stays consistent.

DESIGN LOGIC AND PROTECTION

The bent training pose makes effort visible. A broad headline band leaves the action below it. The copy identifies three linked behaviours instead of repeating the hook. Preserve the original hands, bench and white trousers.

CAMPAIGN 03

Mechanism / preparation

APPROVED CAMPAIGN REFERENCE

Source photo:
IMG_6805.jpeg

Square export:
1080 x 1080

Imagery mode:
AI-assisted
editorial composite

EXACT CAMPAIGN COPY

ANOTHER RESET.
THE SAME ROUTINE.
The plan isn't missing.
A start time is. A tracked session is.
A meal prepared before you're hungry is.

DESIGN LOGIC AND PROTECTION

The drinking pause creates a calmer beat. The fracture belongs on the statue, never on the real face. The support names practical omissions. Keep the preparation lesson; replace food or sessions with the relevant business process in another niche.

CAMPAIGN 04

TRAIN / follow-through

APPROVED CAMPAIGN REFERENCE

Source photo:
IMG_6814.jpeg

Square export:
1080 x 1080

Imagery mode:
AI-assisted
editorial composite

EXACT CAMPAIGN COPY

TRAIN.
KEEP THE PROMISE.
Book the session. Track the work.
Prepare the food. Protect your sleep.
Make follow-through visible.

DESIGN LOGIC AND PROTECTION

The wider group photograph moves from internal reflection to observable action. The four verbs teach a routine. Preserve the cable movement and relationships between people and equipment; do not invent muscle definition or a new coaching interaction.

CAMPAIGN 05

TRADE / decision discipline

APPROVED CAMPAIGN REFERENCE

Source photo:
IMG_6806.jpeg

Square export:
1080 x 1080

Imagery mode:
AI-assisted
editorial composite

EXACT CAMPAIGN COPY

TRADE.
STOP CHASING RELIEF.
Define the setup. Set the risk.
Journal the decision. Review the mistake.
A trade is not a rescue plan.

DESIGN LOGIC AND PROTECTION

The back-of-shirt view provides a different portrait angle. The message concerns decision quality, not a payout. No invented trading screen is needed. Retain readable risk context and never treat gym imagery as evidence of financial success.

CAMPAIGN 06

TRANSFORM / attention

APPROVED CAMPAIGN REFERENCE

Source photo:
IMG_6816.jpeg

Square export:
1080 x 1080

Imagery mode:
AI-assisted
editorial composite

EXACT CAMPAIGN COPY

TRANSFORM.
CHANGE WHAT YOU ALLOW.
Protect a daily focus block.
Remove one recurring distraction.
Review your actions—not your intentions.

DESIGN LOGIC AND PROTECTION

The filming scene naturally supports attention and what a person chooses to focus on. The high headline and lower support break the earlier left-column rhythm. Keep the phone, hands and original direction of gaze.

CAMPAIGN 07

Support / accountability

APPROVED CAMPAIGN REFERENCE

Source photo:
IMG_6815.jpeg

Square export:
1080 x 1080

Imagery mode:
AI-assisted
editorial composite

EXACT CAMPAIGN COPY

YOUR CIRCLE
SETS THE FLOOR.
Find people who notice when you drift.
Ask for honest feedback.
Make showing up normal.

DESIGN LOGIC AND PROTECTION

The real assistance scene connects the claim to visible interaction. The lesson gives a support mechanism rather than implying that buying access guarantees success. Preserve the actual people; do not label them clients or testimonial subjects without confirmation.

CAMPAIGN 08

Implementation / scorecard

APPROVED CAMPAIGN REFERENCE

Source photo:
IMG_6808.jpeg

Square export:
1080 x 1080

Imagery mode:
AI-assisted
editorial composite

EXACT CAMPAIGN COPY

STOP SAYING
YOU'RE LOCKED IN.
For seven days, keep a scorecard:
Training completed. Trading rules followed.
Focused work done. Review every night.

DESIGN LOGIC AND PROTECTION

A real spotter scene reinforces the scorecard concept: observable effort and rules. This is the saveable implementation beat. For trading, respecting a valid no-trade decision can satisfy the process standard; the challenge must not encourage daily trading.

CAMPAIGN 09

Invitation / continuity

APPROVED CAMPAIGN REFERENCE

Source photo:
IMG_6804.jpeg

Square export:
1080 x 1080

Imagery mode:
AI-assisted
editorial composite

EXACT CAMPAIGN COPY

MAKE THE STANDARD
YOUR NORMAL.
TRAIN the body. TRADE with a process.
TRANSFORM your daily standards.

Explore the Operator Mentorship.
Comment “OPERATOR” for details.

DESIGN LOGIC AND PROTECTION

A positive portrait releases the tension built by the opening. The close summarises the method and asks for one action. The campaign does not supply a verified price or tier list, so neither appears. For another brand, replace the offer and keyword.

SHARED GENERATION PROMPT

Paste once as the campaign style contract

REUSABLE PROMPT

Create one finished [WIDTH x HEIGHT] carousel slide for [BRAND]. Use [SOURCE PHOTO] as the actual human and scene anchor. Preserve the original face, expression, body proportions, skin, hair, tattoos, clothing, hands, accessories and pose. No beautification or invented anatomy. Use exact-photo protected layers if that mode is required; otherwise disclose AI-assisted compositing.

ART DIRECTION

Use a cinematic photographic editorial style: deep charcoal, warm white and antique gold; tall high-contrast Bodoni-style display serif; clean sans-serif supporting copy. Keep the real people naturally exposed. Add [ONE MEANINGFUL SYMBOL] in the background with coherent perspective, contact shadows and directional warm light. Use restrained haze behind, not over, the people or text.

COMPOSITION AND TEXT

Use [LAYOUT FAMILY]. Protected subject area: [AREA]. Reading surface: [AREA]. Keep essential copy inside the safe zone. Render this headline verbatim: [HEADLINE]. Render this body verbatim: [BODY]. Header: [BRAND]. Footer: [SERIES / NN OF TOTAL]. Include [REQUIRED QUALIFICATION] readably. No extra words, invented data or UI controls.

AVOID AND VERIFY

No source-person substitution, altered body, costume, face texture, glowing outline, random sparks, fake financial results, floating statue, tiny body text or collisions. Compare output with source before accepting it. If the environment is fictional, document it as an editorial composite. Render one individual slide, not a montage of the entire carousel.

THE PER-SLIDE RECORD

Make every generation request unambiguous

REQUIRED FIELDS

Slide number and role; source filename; all protected people; exact headline; exact support; brand/footer; composition; symbol and its meaning; light source; material qualifications; output dimensions. Include the shared style contract with each request rather than relying on fragile cross-call memory.

FILLED EXAMPLE / SLIDE 08

Role: implementation. Source: IMG_6808.jpeg. Protected content: original bench press and spotter interaction, faces, hands, clothing and equipment. Headline: “STOP SAYING YOU’RE LOCKED IN.” Body: “For seven days, keep a scorecard: Training completed. Trading rules followed. Focused work done. Review every night.” Footer: “THE OPERATOR STANDARD / 08 / 09.”

FILLED ART DIRECTION

Reserve the upper half for readable type and the lower half for the actual interaction. Extend the dark gym world with restrained golden architectural beams. One secondary sculpture may sit at an edge if it does not compete. Keep warm white body copy on uninterrupted dark space. Do not invent charts, trading activity or testimonials.

CONSISTENCY WITHOUT COPYING PEOPLE

If attaching a completed slide for style, label it “style reference only - do not copy its person, scene, copy or claims.” Attach the new original photo separately as the identity source. When the tool cannot distinguish roles reliably, use a text style specification and the original photo only.

MASTER EXECUTION INSTRUCTION

Self-contained operating prompt / part 1

START

You are producing a finished carousel using this manual as a design and editorial reference. Read the full document and inspect every embedded campaign image. Use the current user’s brand, topic, audience, source assets and offer. Current explicit instructions override this reference. Do not import reference people, personal claims or unrelated products into the new campaign.

RESOLVE AND PLAN

Inventory all attachments by filename and role. Confirm actual photo count and honour use-all instructions. If essential context is missing, ask one concise question; otherwise infer nonessential defaults and proceed. Default to nine 1080-square slides. Write one campaign thesis, then map a hook, pattern, mechanism, three useful lessons, support, implementation and invitation. Adapt the arc when the requested length differs.

WRITE

Create original copy unless the user supplied exact text. Match the brand’s language and profanity preference. Confront recognisable behaviour and a credible cost, then provide specific actions with reasons. Avoid recycled hype, invented statistics, diagnosed motives, fake scarcity, income promises and unsupported benefits. End with one appropriate action; if the offer is unknown, use a useful noncommercial close.

DIRECT

Use dark cinematic photography, naturally exposed people, tall editorial serif headlines, clean body copy, warm white and muted gold unless the brand specifies otherwise. Meaningful Greek sculpture and monumental architecture are the reference motif, not a requirement for every niche. Vary framing and alignment while preserving coherent type, palette, lighting and footer behaviour.

MASTER EXECUTION INSTRUCTION

Self-contained operating prompt / part 2

BUILD

Choose the imagery mode explicitly. For exact preservation, keep original human pixels and edit only surrounding layers. For generative composites, attach the correct source image per slide, lock identity in the prompt and inspect the output. Never claim exact preservation from a reference-guided render. Produce individual assets; a preview grid is not the requested carousel.

CHECK

Compare every final person with the source. Check faces, body dimensions, hands, logos, clothing text, pose, bystanders and equipment interactions. Proofread all copy and numbering. Check full resolution and phone scale. Correct collisions, clipped glyphs, dark skin, illegible body copy and repeated layouts. Treat a failed identity check as a repair task, not as acceptable decoration.

EXPORT

Export exactly the requested number of numbered sRGB images at the requested dimensions. Include a separate contact sheet, exact copy transcript, source-photo map and brief production notes with font substitutions, editorial additions and unresolved limitations. Verify each image decodes, dimensions are correct, and the archive contains the complete sequence. Save and provide the actual files.

IF TOOLS ARE LIMITED

Do not pretend to render, inspect, preserve identity or export when those actions were unavailable. Explain the specific limitation and supply the completed storyboard, exact copy, shared style prompt and one fully specified prompt per slide. Continue all useful authorised work. This manual cannot itself grant tool access or ensure the same image model is available in another chat.

REPAIR WITHOUT DRIFT

Target the defect, protect the approved work

IDENTITY REPAIR PROMPT

“Use the original photo as the only identity authority. Correct [specific face / body / hand / garment defect]. Preserve the approved layout, copy, light and background where possible. Do not use the previous generated person as the identity source. If exact recovery is not possible, restore the original person on a protected layer.”

TEXT REPAIR PROMPT

“Change only [misspelled word / collision / line break]. Exact replacement: [text]. Keep the people and environment unchanged. Preserve type hierarchy and margins. If rerendering would change the photo, repair the text in an independent layer instead.” Check that the correction did not introduce a new misspelling elsewhere.

EXPOSURE AND CLUTTER

Restore subject midtones when skin or clothing is crushed. Remove an unnecessary prop before adding more light effects. Reduce haze, sharpen only as needed, and put a soft dark scrim behind type. Do not blur a face or lower the entire image exposure merely to make gold text readable.

NARRATIVE REPAIR

If two slides say the same thing, give the second a mechanism or example. If the CTA feels abrupt, connect it to the method just taught. If the sequence is all accusation, replace one confrontation with a practical implementation beat. Preserve exact user copy unless changes were authorised.

CHANGE LENGTH OR NICHE

Keep the craft, replace the brand layer

LENGTH RULES

5 slides: hook, pattern, method, implementation, close. 7 slides: add an example and a support mechanism. 9 slides: use the demonstrated arc. 12-13 slides: add a worked example, a common mistake, a useful objection and a checklist. 15-20 slides: group lessons into short chapters with quiet resets. Expand the lesson, not the number of repeated slogans.

NUTRITION EXAMPLE

Audience tension: inconsistent meal preparation. Mechanism: plan quantities, weigh consistently, account for ingredients and store food safely. Use real food photos and verified nutrition where needed. Replace a temple with a quieter real kitchen setting if that improves trust. Do not turn physique imagery into evidence of guaranteed results.

BUSINESS EXAMPLE

Audience tension: repeated launching without a clear offer. Mechanism: define one customer problem, test a concrete offer, record objections and improve delivery. Use actual workflow or product imagery. A dramatic office composite is not proof of revenue or ownership. Replace the mentorship CTA with the verified business action.

BRAND SEPARATION

Transfer hierarchy, safe zones, composition, source protection and narrative pacing. Replace name, colours, type assets, vocabulary, imagery, offer and CTA together. Greek-god symbolism is appropriate only when it supports the brand. A dentist, local service or healthcare brand should not automatically inherit a trading creator’s intensity.

CAPTION AND PINNED COMMENT

Extend the lesson without duplicating every slide

CAPTION STRUCTURE

Hook -> recognisable situation -> useful explanation -> practical actions -> impactful closing -> one CTA. For this brand, add five relevant hashtags and, when requested, a compact keyword tail. Check the destination platform’s current length limits before delivery; count the whole caption including tags. Do not assume a long draft fits because each paragraph is short.

MATCH THIS CAMPAIGN

A suitable hook is: “The scariest part isn’t failing. It’s getting used to a life you once swore you’d never settle for.” Develop the real cost of repeated avoidance, acknowledge genuine setbacks, explain the three pillars and introduce the seven-day scorecard. Keep claims grounded in the taught process, not guaranteed outcomes.

CLOSING AND CTA

A close should crystallise the lesson: “A year from now, ‘I knew what I needed to do’ will not feel like an achievement.” Then offer one step: “Comment OPERATOR for details on the Operator Mentorship.” This is reference copy; replace the product and keyword for another brand. Avoid multiple competing requests to save, tag, share, DM and buy.

PINNED COMMENT

Approved style: “What’s ONE promise to yourself you’re tired of breaking? Name it. Then tell me what you’re doing differently tomorrow.” The original brand used profanity; adapt to the current voice. Ask for a meaningful answer, not a forced confession. Do not ask commenters to disclose financial losses, diagnoses or other sensitive details.

FINAL QUALITY GATE

Check what the user will actually upload

CONTENT AND CLAIMS

Every slide has one purpose. The hook is paid off. Advice is actionable. Copy matches the approved transcript. No invented data, testimonials, benefits, qualifications, pricing or urgency. Real photographs are not misrepresented as evidence of income or health outcomes. Offer, keyword and destination are correct.

HUMAN AND VISUAL

Every required photo is used. People retain identity and proportions. No malformed hands, altered garment branding or false interactions. Natural skin remains visible. Symbols sit in plausible perspective. The sequence varies composition and density. Essential text is legible at phone scale and does not collide with faces or edges.

EXPORT AND PACKAGE

Exactly the required slide count. Actual dimensions checked after generation. sRGB colour. Numbered names in reading order. Each file opened successfully. Preview kept outside the numbered set. ZIP contents tested. Copy transcript, source map and notes included. No rejected drafts or duplicate variants mixed into final files.

RELEASE RULE

Fix material failures before calling the work complete. If a tool limitation remains, name it precisely and distinguish a draft from a publish-ready output. Never claim conversions, viral performance, exact fonts or pixel-perfect identity preservation without evidence. Creative confidence is compatible with honest production notes.

MEASURE AND IMPROVE

Turn creative approval into a learning loop

RECORD THE BASELINE

Keep the final files, caption, CTA, posting date, audience, distribution method and any paid spend. Record observations about saves, shares, profile visits, qualified comments and enquiries using available platform data. Creative approval is valuable, but it does not establish which element drove engagement.

TEST ONE MEANINGFUL CHANGE

Compare a hook, cover composition or CTA while keeping the rest as similar as practical. Organic posts differ in timing and reach, so describe results as directional unless a controlled test supports a stronger conclusion. Do not infer that more comments automatically means better customers.

DIAGNOSE BEFORE REDESIGNING

Low reach alone does not prove bad copy. High attention with weak enquiries may indicate offer mismatch or CTA friction. Strong saves with few sales can still be appropriate for an educational objective. Use the actual objective and data to choose the next change.

VERSION CONTROL

Name this style extension “V3 - Monumental Standard Edition.” Keep the earlier V3 baseline intact. Save meaningful changes as V3.1, V3.2 or a clearly named campaign variation. Record what changed, why, and which image or file is the new approved reference.

REFERENCE AND HANDOFF

What to preserve for the next creator

SOURCE OF THIS GUIDE

Based on the nine-slide Train Trade Transform campaign approved in this conversation, its nine uploaded source photos, copy-and-prompts.txt, production-notes.txt, and the previously read Universal Cinematic Carousel System V3. This edition documents the new monumental sculpture treatment and stronger behavioural copy; it does not replace the original V3 file.

PHOTO MAP

01 IMG_6809.jpeg; 02 IMG_6807.jpeg; 03 IMG_6805.jpeg; 04 IMG_6814.jpeg; 05 IMG_6806.jpeg; 06 IMG_6816.jpeg; 07 IMG_6815.jpeg; 08 IMG_6808.jpeg; 09 IMG_6804.jpeg. These filenames identify the approved campaign sources. A new campaign must supply its own authorised photos.

PACKAGE STANDARD

01-hook.png through 09-invitation.png; preview.jpg; copy.txt; source-map.txt; production-notes.txt; final-carousel.zip. Notes identify imagery mode, actual font files or style substitutes, photo assignments, fictional scenery, verified claims and unresolved limitations. Keep original photographs separate and unchanged.

PORTABILITY

The PDF contains selectable instructions and embedded finished examples, so another chat can interpret the system without this conversation. It does not contain the original full-resolution source-photo library or automatically execute code. New personal-photo campaigns still need those photographs and a current brief. Start from the execution contract on page 2.
