THE NEW BASELINE

REAL PRESENCE. CINEMATIC SCALE. A REPEATABLE SYSTEM.

Version 3.0 / September 2026 / A production guide for any brand

THE APPROVED CAMPAIGN

Six finished slides establish the visual authority. This guide translates their typography, compositing, depth, pacing and restraint into a transferable production system.

Upload this PDF with your brand inputs, original photographs and carousel copy. Produce the complete campaign, then inspect and repair it.

01 / START HERE

How to use V3

The PDF is the production contract. The embedded campaign is the visual reference.

REQUIRED INPUT

Attach this entire PDF, your original photographs and either numbered exact copy or a clear topic. Add your brand name, logo, colors, slide count and CTA when available. Use the input card on page 28.

DEFAULT DELIVERABLE

Individual 1080 x 1080 sRGB slide images in reading order, a separate contact-sheet preview and a ZIP containing the final slides. A montage alone is not a complete carousel. Keep a copy transcript and production notes.

AUTHORITY

New explicit user instructions take priority. Otherwise, the six approved campaign images in this guide define V3. Older guides supply useful process rules only where compatible. Their condensed-font mandate, cool-teal requirement and ban on added scenery no longer define the default look.

CAPABILITY LIMITS

A PDF cannot force identical output from every AI tool. The tool must be able to inspect images, compose artwork, render text, export files and perform visual review. Exact fonts and logos require their actual assets. Report limitations honestly; never substitute a written plan for requested finished images without saying so.

02 / WHAT CHANGED

The V3 design contract

Keep the craft. Adapt the brand. Preserve the human.

THE NEW VISUAL SIGNATURE

Full-bleed real photographs are composed with high-contrast editorial serif headlines, warm bone text, muted gold, dark architectural surroundings, directional light and controlled tactile texture. The image feels like a campaign still with a clear message.

THE APPROVED EXPANSION

Symbolic stone, sculpture, doorways, steam, reflective metal and light can extend the photographic world. They must support the slide meaning. A two-photo editorial composition is now part of the system. Fine frames and diagonal divisions are allowed when intentional.

WHAT STAYS LOCKED

Legible text, coherent hierarchy, protected identity, visible natural skin, accurate claims, purposeful image rotation, meaningful pacing, safe margins and verified final exports. Never improve the design by changing someone's face, body, pose, ethnicity, clothing or physical proportions.

WHAT REMAINS OPTIONAL

Gold is the demonstrated brand accent, not a universal requirement. Sculpture, marble, haze and monumental architecture are optional motifs. A food brand, clinic or software company should inherit the compositional discipline without inheriting irrelevant luxury props.

03 / THE SYSTEM

Separate engine from brand

This prevents every client from becoming an Operator look-alike.

FIXED ENGINE

One dominant idea per slide; headline-body-utility hierarchy; subject protection; a spacing grid; clear contrast; coherent photographic compositing; role-based pacing; evidence integrity; and a repeatable review/export workflow.

SWAPPABLE BRAND LAYER

Brand promise, audience, tone, neutral palette, accent, typefaces, logo, imagery, material language, symbols, product assets, offer and destination. Change these as a coherent set rather than randomly recoloring the finished example.

THREE ADAPTATION MODES

Faithful V3: retain serif, dark base and warm metallic atmosphere. Brand translation: retain layout and depth, replace palette, type and motifs. Evidence-first: prioritize real products, screenshots or diagrams and reduce dramatic scenery. Select one mode before production.

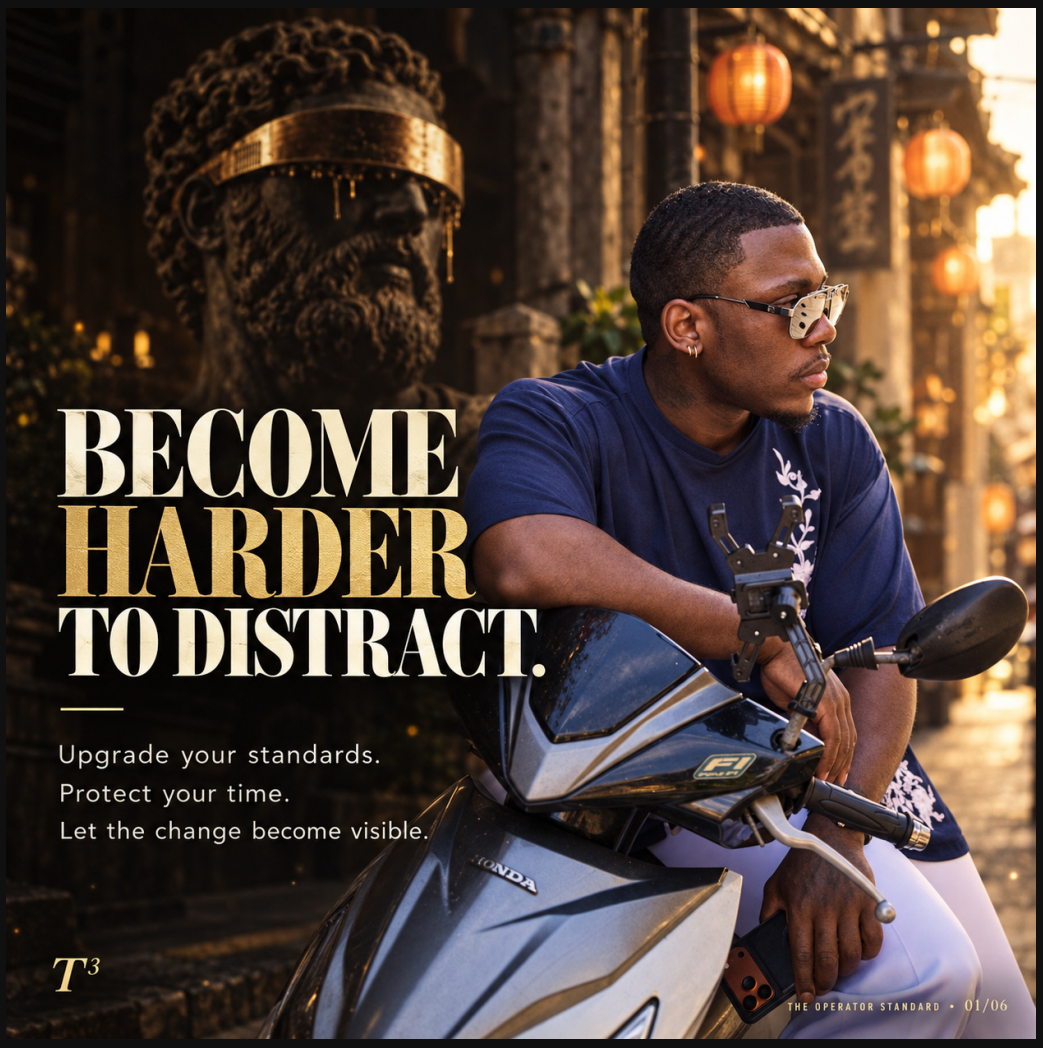

RECOGNIZABILITY TEST

Remove the logo mentally. The campaign should still look related through type behavior, color relationships, light, spacing and composition. Remove the effects mentally. The message and photograph should still work.

04 / APPROVED REFERENCE 01 / HOOK

Human presence + symbolic scale

These are finished campaign references, not literal templates for every future brand.

ROLE

01 / Hook

GEOMETRY

Subject ~right 55%; type ~left 48%; support below headline. The slight visual interlock is acceptable only where every letter remains clear.

The real scooter portrait anchors the right side. A large, secondary bust gives the background depth. The left-side headline uses a bone setup and gold emphasis.

Use this layout for a short identity hook or a sharp opening claim. Keep the face, hands and clothing unobstructed. The statue is a separate prop, never a transformed version of the subject.

04 / APPROVED REFERENCE 02 / STANDARD

Mirror portrait + editorial statement

These are finished campaign references, not literal templates for every future brand.

ROLE

02 / Standard

GEOMETRY

Type ~right 54%; subject ~left 42%; calm gap between them. Use two short supporting blocks and keep steam off the visible body.

The actual mirror pose remains on the left. The reflection boundary preserves the originally obscured face. Architectural material and peripheral steam create a more dramatic setting.

Use for personal standards, craft, preparation or a close product detail. Do not reconstruct the hidden side of a face, smooth skin, deepen abs or reshape the torso.

04 / APPROVED REFERENCE 03 / MECHANISM

Two photographs, one argument

These are finished campaign references, not literal templates for every future brand.

ROLE

03 / Mechanism

GEOMETRY

Hero photo ~left 48%; copy ~upper right; secondary photo ~lower right. Reserve a dark uninterrupted reading surface. Keep the diagonal away from faces and essential words.

The gym photograph carries the human action. The meal and studio photograph adds the routine that supports it. A diagonal divider creates a purposeful secondary scene.

Use when two source photographs explain a relationship: making and using, work and preparation, product and detail. This is a diptych, not a grid of unrelated photos.

04 / APPROVED REFERENCE 04 / ACCESS

Environment as the metaphor

These are finished campaign references, not literal templates for every future brand.

ROLE

04 / Access

GEOMETRY

Centered headline and copy above the environmental focal point; doorway at both sides. The doors frame the eye path rather than becoming a competing product.

An empty real studio appears through added dark doors. The architecture makes selective access visible. Centered text changes the rhythm after three asymmetrical layouts.

Use an environment when a person would add no information. The final approved version contains no invented seated person. An earlier generated person was rejected and removed.

04 / APPROVED REFERENCE 05 / REFLECTION

Full-body scene + quiet depth

These are finished campaign references, not literal templates for every future brand.

ROLE

05 / Reflection

GEOMETRY

Large headline upper left; brief support beneath; full body on right. Let the path provide depth without covering copy in smoke.

The supplied walking photograph keeps the human scale and pose. A long visual path, pool light, peripheral steam and an architectural destination create a reflective beat.

Use for solitude, transition, recovery, process or a journey. Preserve feet, hands and natural anatomy. Keep back and skin visible. Background additions must remain symbolic, not documentary proof.

04 / APPROVED REFERENCE 06 / CLOSE

Identity-led invitation

These are finished campaign references, not literal templates for every future brand.

ROLE

06 / Close

GEOMETRY

Text left, portrait right, restrained border inside the edge. Logo and folio stay secondary. Keep phone, helmet, clothing and face consistent with the source.

The actual elevator selfie provides the final human anchor. Warm reflective metal, a thin frame and a restrained invitation carry the same visual language into the close.

Use one offer and one action. Replace all Operator names, slogans and marks for another brand. Avoid course boxes, pricing strips or invented benefits unless the brief explicitly calls for them.

05 / PREFLIGHT

Inventory before invention

A mismatch in the asset count must never quietly become fabricated photography.

CLASSIFY EVERY ATTACHMENT

Separate original personal/product photos, style references, copy screenshots, logos, data evidence and documents. A Pinterest poster is an effects reference, not a personal photo. Record filename, role, orientation, usable resolution and subject.

CHOOSE AND ROTATE

Assign every requested photo to a slide or a purposeful two-photo composition. When the user asks for all assets, use them all unless a concrete constraint blocks it. If the stated photo count differs from the upload, disclose the mismatch and use previously authorized photos only when appropriate.

SCREENSHOT CLEANUP

Crop phone chrome, playback controls, thumbnails, likes, handles and UI from source screenshots. If a control covers an essential body part, prefer another source. Do not hallucinate the missing anatomy. Keep original files untouched.

SOURCE QUALITY

Use the highest-resolution originals available. Do not repeatedly recompress. Preserve aspect ratio, clothing text and tattoos. Never mirror a person to solve the layout. Note when a low-resolution input limits sharpness.

06 / IDENTITY

Protect the actual subject

This is a hard production constraint, not an aesthetic preference.

LOCK THE PERSON

Preserve face shape, expression, gaze, hairline, skin tone and texture, body dimensions, muscularity, tattoos, clothing, accessories, hands and pose. Proportional scaling of the whole photo is allowed; reshaping body parts is not.

SEPARATE PERSON FROM SCENERY

Use a subject mask or faithful photographic cutout where possible. Apply dramatic edits to the background, lighting atmosphere and props around the person. Do not place a visor, cracks, stone texture, costume, armor or sculptural face over the real person unless explicitly requested.

REFERENCE CONTAMINATION

Label each input: identity source, target photograph, effects reference or layout reference. A person in a style reference must never appear in the new scene. Never copy a pose from another image or invent a seated version of someone from a standing portrait.

COMPARE AND REPAIR

Compare source and final side by side. Check the face first, then shoulder/waist/arm ratios, fingers, clothing and tattoos. If identity drifts, regenerate only the affected composition using the original photo. Do not claim pixel-perfect preservation from generative output; exact preservation requires keeping source subject pixels in a deterministic composite.

07 / CANVAS

A measurable composition grid

Coordinates below are new V3 production targets for a 1080 x 1080 square, not recovered source metadata.

SAFE ZONES

Use an 80 px working safe margin for essential copy: x=80-1000, y=80-1000. Keep the footer around y=968-998. The photograph extends to all four edges. Decorative frames may sit 28-48 px from the edge without moving essential text outside its safe zone.

SPACING TOKENS

Use 8 px increments. Glyph clearance: at least 8 px where large display lines approach. Headline-to-body: 28-48 px. Paragraph gap: 20-32 px. Major module gap: 48-80 px. Keep 32-56 px between text and a protected subject silhouette.

COLUMNS AND ALIGNMENT

Begin with a 12-column mental grid inside the safe area. Use 5-6 columns for a portrait text block or 8-10 for a full-width statement. Select left, centered or split alignment deliberately; do not mix alignments within one reading block.

FIT ORDER

Choose photo and layout first. Break headline at meaning. Adjust block width, crop or layout next. Shorten copy only when authorized. Split the content only when slide count is flexible. Never solve overflow with distorted lettering, unreadable body text or collisions.

08 / TYPOGRAPHY

Monumental serif. Quiet utility.

The exact generated typeface cannot be authenticated. These are practical matching directions.

FONT ROLES

Default hero: a licensed high-contrast display serif with strong verticals and elegant hairlines, such as a Bodoni-style family. Utility: a neutral sans such as Inter or Helvetica-like grotesk. Use two families. If brand fonts are supplied, preserve the role contrast rather than forcing the demonstrated fonts.

1080 PX SCALE

Hero: 84-126 px; exceptional short climax: 132-160 px. Secondary display: 48-72 px. Body: 30-36 px, never below 28 px for essential reading. Utility: 18-22 px; material disclaimers: 22-26 px. Evaluate rendered cap height, not font size alone.

LEADING AND TRACKING

Start headline leading at 0.92-1.05 times size and body leading at 1.25-1.4 times size. Check actual glyph clearance. Display tracking: roughly -1 to +1 px; short uppercase labels: +2 to +3 px. Do not stretch text horizontally or compress it to fit.

EMPHASIS AND TEXTURE

Bone carries the setup; gold carries the decisive phrase. Limit emphasis to one conceptual phrase. A subtle gold ink texture is allowed inside large letters; body text stays clean. No hard outlines, heavy bevels, shiny 3D extrusion or glowing halos around every letter.

09 / COLOR

Color creates hierarchy

Values are reproducible targets inferred from the approved campaign, not sampled original swatches.

DEMONSTRATED PALETTE

Base ink #101010. Deep black #080909. Bone #EEE9DF. Muted gold #BE995C. Gold highlight #D9BC78. Secondary text #B6B0A5. Real photography supplies additional natural color; do not force skin or clothing into the palette.

USE BY ROLE

Aim for a dark dominant surface, bone readable copy and a limited gold accent. The earlier 70/20/10 ratio is a useful starting point, not a pixel quota. Gold may occupy a larger area in a single emphasis headline; avoid making every object gold.

BRAND SUBSTITUTION

Choose one base neutral, one text neutral and one recognition accent. Test the accent against the actual photographic background. If a supplied brand accent is too dark for text, use it on a rule or material and retain neutral readable lettering.

READABILITY

Check contrast on the final image, not only on palette swatches. Aim for at least 4.5:1 for essential small text and 3:1 for large display text as practical targets. Add a feathered local scrim or move the text when the background varies. Gold on bright skin or a window is usually a poor reading surface.

10 / LIGHT AND GRADE

Make the scene deeper, not darker

The subject should remain recognizable and naturally exposed.

GRADE SEQUENCE

Balance exposure and white balance. Protect a subject mask. Reduce distracting background highlights. Add warm environmental light or cooler shadow separation where plausible. Set contrast. Add restrained texture last. Judge the result beside the original.

LIGHT WITH A SOURCE

Use windows, lanterns, practical lamps, doorways and reflections as plausible light sources. Rim light belongs on an edge facing that source. Maintain consistent shadow direction and reflective behavior across inserted objects.

ATMOSPHERE

Use fine haze, steam near a pool or bathroom, soft bloom around practical lights, and small amounts of airborne dust in lit background regions. Keep haze off eyes, hands, torso detail and body copy. Atmosphere must not erase the person.

AVOID

Orange skin, crushed black clothing, sharpened pores, artificial muscle separation, heavy HDR halos, blanket vignettes, random sparks and fog covering half the frame. If the photograph needs less treatment, use less treatment.

11 / ELEMENTS

Give every prop a job

One supporting metaphor is usually enough.

SELECTION TEST

Write the slide's meaning, then name a related object. Select it only if it clarifies that meaning, belongs in the brand world and can sit behind the primary message. An attractive prop with no narrative job should be removed.

V3 MOTIF LIBRARY

Doorway: access, decision or transition. Stone/bust: study, standards or legacy. Path: continuation. Reflective metal: precision or self-assessment. Steam: recovery or quiet. Diagonal: relationship between two processes. Light shaft: attention or direction. Use these as options, not mandatory ingredients.

EFFECT BUDGET

Per slide: one dominant source photograph, at most one large symbolic addition and one atmospheric treatment. A two-photo mechanism slide is an intentional exception. Keep competing materials to two or three; let the image breathe.

CONTEXT AND HONESTY

Added architecture is an editorial composite, not evidence that the user visited that location. Never fabricate a product feature, testimonial, trading result, credential or medical outcome. Do not use statues, visors or cultural symbols merely to imitate the references.

12 / COMPOSITING

Build depth in layers

Use a workflow that keeps protected subjects separate from editable surroundings.

LAYER ORDER

Background environment; architectural or symbolic addition; perspective and contact shadows; source subject; local light integration; background readability mask; headline; body; fine rule/frame; logo/folio; restrained final grain. Keep type independent whenever the tool permits.

INTEGRATION

Match camera perspective, scale, focal depth, color temperature and shadow softness. Place contact shadows where an inserted object meets a surface. Avoid razor-sharp props behind a shallow-focus subject. Do not use a glow outline to hide a bad cutout.

EDGES AND CROPS

Inspect hair, ears, fingers, transparent glasses, clothing edges and mirror boundaries. Preserve existing occlusion. Do not crop through a wrist, knee or fingertip merely to enlarge the face. Never generate anatomy to repair a careless layout.

MOTION AND TEXTURE

Direction can come from gaze, a path, an angled divider or receding architecture. Keep the body static if the source is static. Grain should unify layers at final size, not hide poor source resolution or cover text.

13 / LAYOUT LIBRARY

Six compositions, many brands

Use the campaign anatomy pages as visual examples. These are planning zones, not rigid boxes.

A / PRESENCE HOOK

Subject x=510-1040, type x=80-550. Headline y=300-680, support below. Background metaphor lives above or behind the type. Use 12-30 words total. Adapt position to the original photograph; never mirror the subject.

B / MIRROR STATEMENT + C / DIPTYCH

B: subject x=60-450; copy x=475-995, centered vertically. C: hero photo left 45-50%; copy upper-right; supporting photo lower-right. Use 25-45 words and one shared argument. Keep panel edges intentional; never split a sentence across photographs.

D / THRESHOLD + E / JOURNEY

D: centered text x=140-940, y=90-445; environmental focal point below; doorway edges frame it. E: text left x=80-590, y=100-590; full-body subject right. Choose D to reset alignment and E to slow the narrative.

F / INVITATION

Portrait right x=570-1040; copy left x=80-580; title y=200-440, support y=490-740, CTA y=780-890. Optional fine frame. Use one offer, one reason and one action. Reflow long copy rather than squeezing it into these approximate zones.

14 / COPY ENGINE

Earn the swipe, then repay it

A dramatic visual needs a useful, coherent argument.

CHOOSE ONE THESIS

State what the reader should understand or do differently. Identify the audience's concrete tension and the small promise this carousel can fulfill. Do not try to sell trading, fitness, business and identity equally in every six-slide campaign.

HOOK CONSTRUCTION

Combine a familiar frustration with a specific change of perspective. Example from V3: BECOME HARDER TO DISTRACT. The support tells the reader what follows: standards, time and visible change. Use 3-10 dominant words and one concise supporting thought.

MAKE TEACHING CONCRETE

Give an action, a reason and a recognizable situation. Replace vague instructions such as raise your frequency with observable behavior: book focused work before accepting invitations, or choose when to answer messages. Each slide should add information.

VOICE AND INTEGRITY

Match the brand's intensity and vocabulary. Profanity is optional and must fit the audience. Avoid invented statistics, fake scarcity, humiliation, unsupported guarantees and recycled generic slogans. A user-supplied claim still needs appropriate context; reference artwork is never a claims source.

15 / NARRATIVE PACING

Plan the sequence before the artwork

A change in composition should correspond to a change in the argument.

THE APPROVED SIX-BEAT ARC

1 Hook: become harder to distract. 2 Standard: visible care. 3 Mechanism: calendar boundaries. 4 Relationships: access. 5 Reflection: useful solitude. 6 Invitation: continue the work. It moves from identity to actions to an appropriate offer.

DENSITY RHYTHM

Hook 12-30 words; teaching 25-50; mechanism 35-60 when needed; reset 8-25; close 25-50. These budgets are targets, never permission to delete exact copy. Avoid three equally dense slides in a row.

VISUAL RHYTHM

Alternate portrait scale, scene type, alignment or photo count every 1-3 slides. Do not repeat one layout more than twice consecutively unless repetition explains a process. Keep type behavior and palette stable while changing composition.

EMOTIONAL MOVEMENT

Start with relevance, earn trust through useful actions, provide room for reflection, then invite. Dramatic does not mean maximum intensity everywhere. A quiet environmental slide makes a strong human close more effective.

16 / VARIABLE LENGTHS

Expand the lesson, not the text size

Use as many beats as the content needs. Respect a fixed requested slide count.

5-7 SLIDES

5: Hook / Frame / Teach / Example or reflection / Close. 6: use the demonstrated V3 arc. 7: Hook / Frame / Evidence / Teach / Mechanism / Recap / Close. One central idea should govern the whole sequence.

10-12 SLIDES

10: Hook / Frame / Stakes / Evidence / Teach A / Teach B / Mechanism / Objection / Recap / CTA. 12: add a worked example and an implementation checklist. Insert a sparse reset after a dense pair; do not add filler just to meet a number.

15-20 SLIDES

Build short chapters. Start with the hook and frame, then 3-4 learning modules containing a principle, example and application. Include visual resets between modules, followed by objection, synthesis and close. Longer carousels need stronger organization, not more effects.

OTHER DIMENSIONS

For 1080 x 1350, recompose the vertical hierarchy and subject crop. For 1080 x 1920 stories, use a fresh layout and conservative top/bottom UI allowances; test in the destination app. Never stretch a square image into portrait or assume platform overlays are permanently fixed.

17 / CONVERSION

Soft marketing, clear invitation

Make the offer the logical continuation of the lesson.

NATIVE CLOSE

Keep the same portrait treatment, font hierarchy, color and atmosphere. Explain briefly how the offer relates to the problem just taught. Name the offer once and give one action. A CTA can be save, reflect, visit, book or buy according to the brief.

NO INHERITED OFFERS

Do not carry Operator Mentorship, T^3, Train Trade Transform, pricing, DM keywords or any previous brand benefit into another client's campaign. Use only the current brief's brand and verified offer details.

EVIDENCE-BASED PERSUASION

Use actual process, useful examples and documented results where available. A generated gold bar, muscular figure or trading screen is not proof of performance. Never turn visual symbolism into a claim about income, health or business outcomes.

IF NO OFFER IS SUPPLIED

Close with the takeaway or a relevant noncommercial next step. Do not invent a product or destination. When exact CTA wording is supplied, preserve it. Include required qualifications in readable text rather than hiding them in a decorative footer.

18 / ADAPTATION EXAMPLES

Translate the craft into another niche

These examples illustrate design decisions, not promises or ready-made claims.

FINANCE AND SOFTWARE

Finance: real desk, sourced report, ledger, restrained architectural frame; no invented P&L. Software: supplied product screenshot, workstation, light and precision geometry; avoid fictional UI features. Use brand accent colors and preserve readable screen evidence.

NUTRITION AND HEALTHCARE

Nutrition: real preparation, ingredients, weighing and coaching workflow; use actual product labels. Healthcare: clean clinical materials and professional photography; reduce ornamental drama. Never infer qualifications or outcomes from a white coat or anatomical motif.

FASHION AND HOSPITALITY

Fashion: garment details, editorial portrait, tactile fabric and restrained reflection; preserve fit and color. Hospitality: real property images and authentic spaces. Clearly separate conceptual campaign scenery from documentary property photography.

EDUCATION AND LOCAL SERVICES

Education: real teacher, tools, diagrams and practice. Local service: technician, process and finished work. The visual can be premium without marble or statues. Keep the actual service recognizable and use a single appropriate booking or inquiry route.

19 / PRODUCTION SKILLS

The complete craft stack

A good tool workflow must cover these capabilities, even if one person performs them all.

STRATEGY AND EDITORIAL

Brief interpretation; audience awareness; thesis selection; hook writing; claim checking; copy compression; slide-role planning; narrative pacing; offer alignment. Output: a clear storyboard with exact copy before rendering.

ART DIRECTION AND DESIGN

Reference analysis; typography matching; palette design; grid composition; optical alignment; metaphor selection; photo selection; masking; perspective; material integration; local color grading; contrast; hierarchy. Output: a coherent campaign, not unrelated posters.

PRODUCTION AND VALIDATION

Tool routing; reliable typesetting; output sizing; font/glyph checks; image inspection; identity comparison; screenshot cleanup; color-space handling; export naming; archive creation. Output: tested files that open correctly and are ready to upload.

ITERATION AND HANDOFF

Diagnose one failure at a time; preserve approved areas; version changes; record asset roles and prompts; retain final copy; disclose substitutions. The baseline should teach a future operator how to repair a bad result, not only how to request a good one.

20 / QUALITY GATE

Inspect before calling it finished

Every failure below requires a repair or an honest limitation notice.

IDENTITY AND EVIDENCE

Compare every human to its source. Check facial geometry, body dimensions, tattoos, clothing, hands and pose. Confirm no reference-only person leaked into a scene. Verify that claims, prices, data and testimonials came from authorized inputs.

TYPE AND LAYOUT

Proofread every word, punctuation mark and slide number. Check visible glyph bounds for collisions and clipping. Confirm no copy crosses eyes, face or key body areas. Inspect at full size and approximately 360 x 360. Essential support text must remain readable.

VISUAL AND SEQUENCE

Check lighting consistency, cutout edges, skin exposure, scene scale and prop relevance. View the complete contact sheet. Confirm photo rotation, a coherent palette, varied compositions and a natural final CTA. Compare to the six approved references.

FILE AND DELIVERY

Verify exactly the requested count and dimensions. Open every image; ensure it decodes. Use numbered sRGB PNGs or high-quality JPEGs. Keep the preview outside the numbered sequence. Test the ZIP contents. Do not claim tests were performed if they were not.

21 / REPAIR PLAYBOOK

Fix the cause, preserve the good work

Use a targeted correction instead of starting the entire campaign again.

CHANGED FACE OR BODY

Return to the original source. Remove any human-bearing style reference from the edit inputs or label it unambiguously. Lock source pose and proportions. For exact identity, use unchanged source pixels on a protected layer and edit the environment only.

TEXT COLLISIONS OR UNREADABLE COPY

Move or widen the copy block; choose another layout; shorten only if permitted; split only if count is flexible. Repair typography in a reliable text layer when possible. Recheck line breaks, glyph clearance, footer and final phone-size legibility.

TOO DARK OR TOO ARTIFICIAL

Restore subject midtones and natural skin. Reduce background effect intensity, remove an unnecessary prop, soften bloom and match shadow direction. Keep the real photograph as the anchor. Do not add more effects to hide an integration problem.

REPEATED LAYOUTS OR OVER-SELLING

Change one composition family or camera scale. Add an environmental or mechanism beat. Keep the same fonts and palette. Remove duplicated CTA language, feature clutter and irrelevant product boxes. Leave one clear action on the close.

22 / REUSABLE INPUT CARD

Fill this once per campaign

Attach alongside this PDF and your source assets.

BRAND LAYER

Brand/page: [name]
Audience and desired takeaway: [one sentence]
Voice: [tone and vocabulary]
Base / text / accent colors: [hex values or supplied kit]
Display / utility fonts: [assets or approved substitutes]
Logo and slogan: [provided files/text or none]

CAMPAIGN LAYER

Topic: [topic]
Objective: [educate / document / engage / convert]
Slide count: [number; fixed or flexible]
Format: [default 1080 x 1080]
Copy: [numbered text OR request original writing]
Copy edits allowed: [yes/no; exact-copy default is no]

ASSET AND EFFECT LAYER

Photos: [filenames and intended roles; use-all yes/no]
Identity-protected subjects: [list]
Style-only references: [list]
Allowed scenery/effects: [list or V3 defaults]
Product/data evidence: [actual assets or none]
Forbidden changes: [specific restrictions]

CONVERSION AND DELIVERY

Offer and verified benefits: [if relevant]
CTA and destination: [exact wording]
Required qualifications: [if applicable]
Output: numbered images + preview + ZIP
Missing nonessential fields: infer from supplied materials; disclose assumptions. Ask only when a missing input blocks faithful production.

23 / COPY-AND-RUN PROMPT

The master production instruction

The input card supplies the variables. This prompt supplies the workflow.

PASTE AFTER YOUR ATTACHMENTS

Create a complete carousel using this Universal Cinematic Carousel System V3 PDF as the production baseline. Read all pages and inspect all six embedded approved campaign images. Use the current brand brief, source photos and copy; do not inherit the reference brand, topic or offer.

Inventory the attachments and label each as source photo, identity reference, layout reference, effects reference, logo or evidence. Resolve the slide count and create a storyboard with one role, exact copy, source photo and composition per slide. If copy is exact, preserve it. If only a topic is supplied, write useful original copy with a clear thesis and appropriate brand voice.

Build finished individual slides at the requested dimensions, default 1080 x 1080. Use the V3 hierarchy, photographic depth, deliberate negative space, editorial display type and quiet utility text. Translate the palette and motifs for the actual brand. Add only meaningful cinematic elements. Preserve real faces, physiques, proportions, skin, clothing, tattoos, accessories and poses. Do not invent a new view of a real person. Keep people clearly visible.

Rotate requested photographs purposefully. Use a two-photo composition only when it explains one idea. Vary layout, scale or density every 1-3 slides. Keep text inside safe margins with no collisions. Use independent accurate text layers when possible. Never invent claims, results, credentials, product features, locations presented as real, prices, urgency or testimonials.

Inspect each finished slide against its source at full and phone size. Check identity, copy, glyph bounds, exposure, numbering and scene integration. Correct failures before export. Deliver numbered sRGB images, a separate contact-sheet preview and a ZIP. Include a copy transcript and brief production notes. Be honest about unavailable tools, font substitutions or identity limitations. Produce the actual files, not only a plan.

24 / PER-SLIDE PROMPT

Control the render precisely

Use this structure for individual slides and targeted repairs.

RENDER SPECIFICATION

Asset: one [dimensions] carousel slide.
Role and number: [hook / teach / mechanism / close], [NN/total].
Brand: [palette, display font, utility font, logo].
Source photo: [filename]. Identity lock: [subject and protected attributes].
Style-only reference: [filename; never copy its person or claims].

ART DIRECTION

Composition family: [A-F or justified alternative].
Protected subject area: [placement]. Text area: [placement].
Exact headline: [text]. Exact body: [text]. Footer: [text].
Allowed addition: [one meaningful prop/architecture].
Light: [source, direction, warmth]. Atmosphere: [one restrained treatment].

CONSTRAINTS

No face/body/pose changes; no missing fingers; no altered clothing text; no invented people; no screenshot controls; no text collisions; no unreadable support; no unrelated effects. Keep all essential copy inside safe margins. Render only the approved copy and brand assets.

REPAIR INSTRUCTION

Change only [identified defect]. Preserve [approved elements]. Compare against [original source]. Correct [specific geometry/text/light issue]. Recheck the affected area and the full slide. Never use a flawed generated identity as the new identity source.

25 / DELIVERY AND GOVERNANCE

Make the system repeatable

This guide documents the approved look without treating every generated detail as a rule.

PACKAGE STRUCTURE

01-hook.png, 02-standard.png and so on; preview.jpg; copy.txt; production-notes.txt; final-carousel.zip. Notes identify asset sources, actual font substitutions, editorial composites and any unresolved limitation. Keep rejected renders outside the final package.

VERSION DISCIPLINE

V3 is a new baseline, not a replacement of original uploaded files. Save future changes as V3.1, V3.2 or a new major version when the visual language changes. Record what changed, why and which campaign became the approved reference.

ACCEPTANCE HIERARCHY

User intent and explicit restrictions first; accurate content and identity second; mobile readability third; visual consistency fourth; decorative drama last. If an effect conflicts with any earlier requirement, remove the effect.

PROVENANCE

Derived from the supplied Universal Carousel Branding Guidelines Blueprint (21 pages), Operator Carousel Baseline Design Guidelines (12 pages), and the approved six-slide Operator Standard campaign created in this conversation. Numeric V3 settings are proposed production standards. Font names are practical substitutes, not authenticated generated-font metadata. The six embedded artworks are visual references; their copy and brand marks are not defaults for other businesses.
